

AZAMAT JORAYEV

Backend developer

15457akdepe@gmail.com | +993 64 754591 | Ashgabat

HackerRank | **GitHub** | **LeetCode** | **LinkedIn**

EDUCATION

Belarus State Aviation Academy

Civil Aviation Engineer

Percentage: 80%

Belarus

September 2012 - July 2017

EXPERIENCE

Milli San | Backend developer

Ashgabat, Turkmenistan | September 2021 - May 2022

Designed and built backend services for web and mobile applications from scratch.

- Designed GraphQL schemas for a business application - defining types, queries, mutations, and resolvers that served both we and React Native clients from a single API layer.
- Wrote Node.js backend logic with PostgreSQL, handling authentication, data relationships, and file management.
- Containerized services with Docker for consistent local and production environments.

Stack: Node.js, TypeScript, PostgreSQL, GraphQL, Docker

IOGRU | Backend developer (Fullstack)

New York, USA, Remote | August 2022 - December 2022

Co-built the backend of an internal CRM and greenhouse IoT monitoring platform.

- Designed PostgreSQL schema for a multi-tenant CRM: users, roles, projects, tasks, Kanban state, calendar events, and IoT sensor readings.
- Integrated Redis for session caching and job queue handling.
- Built REST APIs consumed by both web dashboard and microcontroller data ingestion endpoints.
- Used Sequelize ORM for migrations and model relationships across a normalized schema.

Stack: NestJS, PostgreSQL, Redis, Sequelize, REST, Docker

Kommo (AmoCRM) | Backend Developer (PHP)

Moscow, Russia | January 2023 - May 2023

Worked inside an established engineering team maintaining and extending the backend of kommo.com - a large-scale CRM product. This was my deepest exposure to high-load PHP backend systems.

- Developed new CRM features in PHP, working within a large legacy codebase with strict code review processes and engineering standards.
- Used Gearman for background job processing - handling async tasks like notification dispatch, report generation, and data sync pipelines.
- Worked with NGINX configurations for routing and service separation in a multi-service deployment environment.
- Bug fixing across MySQL-backed business logic with a focus on data consistency and correctness at scale.

Stack: PHP, MySQL, Laravel, Symfony, OOP/SOLID, Gearman, Docker, NGINX

Disarcs | Full-Stack developer

Spain | December 2024 - July 2025

Sole backend developer on RocketPrep (rocketprep.net) - an exam preparation platform serving users with mock exams, flashcard learning, and performance analytics.

- Designed the full database schema: users, subscriptions, question banks, exam sessions, answer records, and progress tracking - built to handle concurrent exam sessions cleanly.
- Built a flexible API powering three distinct quiz modes (timed mock exams, difficulty-focused practice, and flashcards) with shared session management and scoring logic.
- Implemented authentication and subscription handling: JWT-based auth, refresh token rotation, role-based route guards, and plan-based feature access.
- Built an admin API for content managers to create, update, and publish question banks and category trees with media attachments.

Stack: NestJS, TypeScript, PostgreSQL, Redis, REST API

Skyfort Capital | Full-Stack developer

Dubai, Remote | August - Present

Designing and building the backend of a wealth management platform used by financial advisors and investors to manage portfolios, assets, cash flows, and collaborative financial plans.

- Designed and implemented core backend modules for wealth plan management: plan structure, multi-step calculation logic, workflow state machines, and audit trails.
- Built a documents & files management system with versioning, permission-based access, upload/download pipelines via AWS S3, and advisor/investor review workflows.
- Developed real-time features using WebSockets - live plan updates, collaborative state sync, and notification delivery without polling.
- Integrated OpenSearch + Logstash for indexing and searching across financial records, enabling fast full-text and filtered queries on large datasets.
- Designed RESTful APIs consumed by both web clients and mobile, including pagination, filtering, and role-based access control.

Stack: NestJS, TypeScript, PostgreSQL, Drizzle ORM, WebSockets, OpenSearch, AWS

SKILLS

Programming Languages:	Javascript, Typescript, Node
Libraries/Frameworks:	Nest JS
Tools / Platforms:	Docker, Git, GraphQL, MinIO, Temporal, ClickHouse, Redis, Mobx
Databases:	MySQL, PostgreSQL, MongoDB
