HackerRank | **GitHub** | **LeetCode** | **LinkedIn**

EDUCATION

Belarus State Aviation Academy

Civil Aviation Engineer

Percentage: 80%

Belarus

September 2012 - July 2017

EXPERIENCE

Sanly Mahabat | Junior Frontend developer

Turkmenabat, Turkmenistan | July 2018 - March 2020

Started my career building SPAs for clients - from layout implementation to JS interactivity.

Learned to work from design files and deliver pixel-accurate, cross-browser interfaces.

Tehnologiya Dunyasi | Frontend Developer

Turkmenabat, Turkmenistan | April 2020 - August 2021

Grew from jQuery/vanilla JS into the React ecosystem. Took ownership of complete feature development, not just implementation of designs.

Milli San | Frontend developer

Ashgabat, Turkmenistan | September 2021 - May 2022

- Built responsive web and cross-platform mobile interfaces for internal business tools.
- Introduced GraphQL on the frontend - defined query structures and worked directly with backend on schema design.
- Started cross-platform mobile development using React Native alongside the web product.

IOGRU | Frontend developer

New York, USA, Remote | August 2022 - December 2022

Built the frontend of an internal CRM and greenhouse monitoring platform based on Berry Dashboard.

- Developed a Kanban board, team calendar, and role-based task management interface from scratch.
- Built a real-time sensor dashboard displaying humidity, temperature, and irrigation cycle data from IoT microcontrollers - with live chart updates and alert states.
- Implemented Redux-based global state with React Query for server sync, keeping the UI consistent across concurrent users.

Jan Technology | Middle+ Frontend developer

Ashgabat, Turkmenistan | May 2023 - May 2024

Initiated, led, and shipped **BeletFilm** - a full video streaming platform for Turkmenistan, comparable in scope to a regional Netflix. I was the sole frontend lead on the project.

- Designed and built the entire web client: home feed, category browsing, film/series detail pages, and a custom HLS-based video player with quality switching and playback controls.
- Built the admin panel for content managers: video/series upload pipeline, metadata management, user analytics dashboard, and subscription management tools.
- Implemented a responsive, mobile-first layout that works cleanly across all screen sizes - critical since most users accessed via mobile browsers.
- Coordinated directly with a Golang backend team, defined API contracts, and handled integration of streaming endpoints using HLS.js.

Disarcs | Frontend developer (Fullstack)

Spain | December 2024 - August 2025

Led frontend development of RocketPrep (**rocketprep.net**) - a full-featured exam preparation platform with multiple quiz modes, user progress tracking, and a content management dashboard.

- Built a multi-mode quiz engine on the web: mock exams, targeted practice on weak topics, and flashcard-style review - all in a single cohesive React/Next.js application.
- Designed and implemented the user dashboard: progress graphs, exam history, streak tracking, and personalized study recommendations.
- Built the landing page with Next.js and Tailwind - optimized for SEO and conversion, with fast load times and clean responsive layouts across mobile and desktop.
- Developed the admin panel for content managers to create, organize, and publish exam question banks, categories, and media attachments.

Skyfort Capital | Full-Stack Developer

Dubai | September 2025 - Present

Building the client-facing interface of a wealth management platform used by financial advisors and investors to manage assets, track cash flows, and collaborate on financial plans.

- Architected the frontend from the ground up using React + MobX, establishing patterns for state management, routing, and API integration that the whole team now follows.
- Built the assets & cash flow management UI - complex tables, filterable views, and interactive financial charts that update in real time via WebSockets.
- Implemented a document workflow system: upload, version tracking, advisor/investor review flows, and permission-aware UI states.
- Integrated WebSocket-based live collaboration - users see plan changes and advisor notes update in real time without a page reload.
- Handled frontend search using OpenSearch-backed APIs, including debounced queries and result ranking displays.

SKILLS

Programming Languages: Javascript, Typescript

Libraries/Frameworks: React, React Native, Next JS, HLS

Tools / Platforms: Material UI, React Query, Redux, Docker, Git, GraphQL, MobX
