EDUCATION

Belarus State Aviation Academy

Civil Aviation Engineer

Percentage: 80%

Minsk, Belarus

September 2012 - July 2017

EXPERIENCE

Tehnologiya Dunyasi | Frontend Developer

Turkmenabat, Turkmenistan | April 2020 - August 2021

Moved from vanilla JS into the React ecosystem. Took full ownership of frontend features.

Milli San | Full-Stack developer

Ashgabat, Turkmenistan | September 2021 - May 2022

Built web and mobile applications with full backend ownership. Introduced GraphQL across projects and started cross-platform mobile development using React Native alongside the web product.

IOGRU | Full-Stack developer

New York, USA, Remote | August 2022 - December 2022

Built an internal CRM and IoT-integrated greenhouse monitoring platform from the ground up.

- Designed the full schema and API: multi-tenant user system, role-based task assignment, Kanban board, calendar, and real-time sensor data ingestion from IoT microcontrollers.
- Built the frontend dashboard with live humidity, temperature, and irrigation data, Kanban views, and team management UI.
- Used Redis for caching and job queues; Sequelize for ORM and schema migrations.

Jan Technology | Tech Lead

Ashgabat, Turkmenistan | May 2023 - May 2024

Initiated and led the development of BeletFilm - a video streaming platform for Turkmenistan, similar in scope to a regional Netflix. I drove the product from concept to launch.

- Led a cross-functional team (backend in Golang, design, QA) defined technical requirements, owned API contracts, and kept the project moving across all phases.
- Built the full web client: home feed, browsing, film/series detail pages, and a custom HLS-based video player with quality switching and playback controls.
- Built the admin panel used by content managers to upload films/series, manage metadata, handle user subscriptions, and monitor platform analytics.
- Implemented a mobile-first responsive layout - most users accessed the platform from phones.

Disarcs | Full-stack developer

Spain, Remote | December 2024 - August 2025

Sole developer on RocketPrep ([rocketprep.net](#)) - a complete exam preparation platform with multiple quiz modes, user progress tracking, admin tooling, and a marketing landing page.

- Designed the full data model from scratch: users, subscriptions, question banks, exam sessions, answer records, scoring logic, and progress tracking all built to handle concurrent sessions.
- Built the backend API in NestJS with JWT auth, refresh token rotation, role-based access control, and subscription-tier feature gating.
- Developed three distinct quiz engines on the frontend (mock exams, difficult-question practice, flashcard review) within a single Next.js application with shared session state.
- Built the user dashboard progress graphs, exam history, streak tracking and the admin panel for content teams to manage and publish question banks.
- Delivered a fast, SEO-optimized landing page in Next.js + Tailwind that serves as the top of the acquisition funnel.

Skyfort Capital | Full-stack developer

Dubai, UAE Remote | August 2025 - Present

Building a wealth management platform used by investors and financial advisors to manage portfolios, assets, cash flows, and collaborative financial plans.

- Designed and implemented backend modules for wealth plan management: plan structure, calculation logic, multi-step workflows, and audit trails - from schema design to API delivery.
- Built a document management system with versioning, S3-backed file storage, permission-based access, and review workflows for both advisors and investors.

- Implemented real-time collaboration using WebSockets live plan updates and advisor notes that sync across active sessions without a page reload.
- Built the frontend assets & cash flow views: complex interactive tables, financial charts, and permission-aware UI states using React + MobX.
- Integrated OpenSearch + Logstash for fast, filterable search across financial records.

SKILLS

Programming Languages:	Typescript, PHP, Javascript, Node JS
Libraries/Frameworks:	React, React Native, Nest JS, Next JS
Tools / Platforms:	Git, Docker, Redis, OpenSearch, Temporal
Databases:	MongoDB, PostgreSQL, MySQL
