SUMMARY

Full-stack engineer with 8+ years of experience: React and Next.js on the frontend, Node.js, NestJS and PostgreSQL on the backend. Most recently one of two backend engineers on a wealth-management platform, where I built the e-signature integration and the bank payout workflows on Temporal. Before that I led the web frontend of Belet Video, a YouTube-style platform with 100k+ daily users, and built an exam-prep platform on my own, from the database to its iOS and Android apps.

EXPERIENCE

Full-Stack Developer · **Skyfort Capital** · Dubai · Remote — Aug 2025 – Sep 2026

Internal wealth-management platform for financial advisors, investors and partners.

- One of two backend engineers on NestJS, PostgreSQL and Temporal; wrote 80 of the ~200 API endpoints.
- Replaced manual partner payouts with Temporal workflows that take each payout period through e-signing to a deal and payment orders on the partner bank's API, and built the e-signature integration end to end.
- Owned the Google Drive-style documents section of the advisor and investor dashboards: uploads, sharing and access rules on a NestJS + S3/CloudFront backend, and the React + MobX screens.
- Built most of the nominal-accounts backend and added its screens, tables and lists on the frontend; fixed lag in the AG Grid tables by reworking their MobX reactivity.
- Wrote most of the shared TypeSpec API contract and added contract-based type checking to the frontend's API client: a backend change that breaks a screen fails the build, and Zod rejects unexpected responses before they reach the UI.
- Wrote the backend's first end-to-end tests and most of the suite; they run in CI on every merge, caught bugs before release, and made refactoring safe.

Stack: TypeScript, NestJS, PostgreSQL, MikroORM, Temporal, Socket.IO, OpenSearch, AWS S3, TypeSpec, Zod, Jest, React, MobX, AG Grid

Jan Technology · Ashgabat

Smart TV Frontend Developer (part-time contract) — Feb 2025 – Sep 2025

Smart TV apps for Belet, a streaming service in Turkmenistan with 150k+ users.

- Shipped Belet's Smart TV apps to LG (webOS), Samsung (Tizen) and Hisense from a shared React + TypeScript core with thin per-platform layers.
- Cut a ~2 s input freeze on low-end TVs to an instant response by rendering and loading only what's on screen.
- Built a search page with its own on-screen keyboard for the remote, and an hls.js player with seek, skip and resume-watching.

Stack: React, TypeScript, hls.js, React Query, Zustand, webOS, Tizen

Lead Frontend Developer — May 2023 – May 2024

Belet Video, a YouTube-style video platform for Turkmenistan: 100k+ daily users within 3 months of launch (since shut down).

- Led the web frontend from the first commit, next to a two-person backend team; hired, mentored and reviewed the code of 3 junior developers as the product team grew to 13+.
- Chose Next.js with server-side rendering for SEO and for slow connections: pages fetch their data over the server's fast link instead of the viewer's mobile internet.
- Built the viewer site's design system from scratch in Storybook instead of adopting a UI kit.
- Built the player on hls.js with quality switching, and an iframe embed so videos play on other sites.
- Coordinated the native iOS (SwiftUI) and Android (Kotlin) team: agreed how big features worked on every platform, such as API use and the player, and tested their releases.
- Built the admin panel, including the analytics pages behind the user numbers, and a self-serve ad platform.

Stack: Next.js, React, TypeScript, hls.js, Storybook, i18n, REST

Full-Stack Developer · **Freelance** · Remote — Jun 2024 – Aug 2025

Project-based work for Disarcs (RocketPrep, FlashPrep) and smaller clients (Golaý, i-me Translation).

- Built RocketPrep (rocketprep.net), an exam-prep platform with 10k+ registered users, as its only developer: the Next.js web app, the NestJS/PostgreSQL backend with subscriptions, and iOS/Android apps from one React Native codebase.
- Built FlashPrep, a separate React Native exam-prep app for a second client.
- Built the Node.js/GraphQL/PostgreSQL backend for Golaý, a hyperlocal search app, and the React Native app for i-me Translation, live interpretation over LiveKit/WebRTC.

Stack: Next.js, React, TypeScript, Tailwind CSS, React Native, NestJS, PostgreSQL, GraphQL, LiveKit

Full-Stack Developer (contract) · **IOGRU** · Remote · New York, US — Aug 2022 – May 2023

Project-based work for a US company, built from scratch: an internal CRM and an IoT greenhouse-monitoring tool.

- Built the Kanban board, team calendar and a live sensor dashboard (humidity, temperature, irrigation cycles) in React with Redux and React Query.
- Designed the multi-tenant PostgreSQL schema and the NestJS APIs behind the dashboards and IoT data ingestion.

Stack: React, Redux, React Query, NestJS, PostgreSQL

Full-Stack Developer · **Milli San** · Ashgabat — Sep 2021 – May 2022

Websites and internal business tools for clients.

- Built client websites, online shops and admin panels in React, with Node.js, GraphQL and PostgreSQL backends.
- Built Hayyat, a water-delivery mobile app, in React Native.

Stack: React, React Native, Node.js, GraphQL, PostgreSQL, Docker

Frontend Developer · **Sanly Mahabat, Tehnologiya Dunyasi** · Turkmenabat — Jul 2018 – Aug 2021

- Started as a junior building client websites and SPAs from designs, pixel-accurate and cross-browser, in JavaScript and jQuery; switched to React in 2020 and took over whole features end to end.

Stack: JavaScript, React, jQuery, HTML, CSS

PROJECTS

- **Rebuffer**: a browser lab that runs a real hls.js player through a network simulated in a Service Worker, with live charts and a QoE report (React, TypeScript, Zustand, Vite). 97 KB of JavaScript on the home page, Lighthouse 98–99 for performance and 100 for accessibility, 554 unit tests and 178 Playwright checks in three browsers. rebuffer.azamatos.com
- **Visaproof**: a job finder for developers who need a visa in Europe (Nuxt, Node.js, PostgreSQL, Claude): about 15,000 open roles at 2,400 companies, read from their own job boards, each sponsorship answer backed by a quote from the posting. 100% precise on “sponsors” in 200 labelled postings, against 33% for keyword rules. visaproof.azamatos.com

SKILLS

Languages:	TypeScript, JavaScript, HTML, CSS, SQL
Frontend:	React, Next.js, React Native, MobX, Redux, Zustand, React Query, Tailwind CSS
Backend:	Node.js, NestJS, PostgreSQL, Temporal, GraphQL, REST, Socket.IO, Redis
UI / Media:	Design systems, Storybook, AG Grid, shadcn/ui, Figma, Accessibility (semantic HTML, ARIA), hls.js, Smart TV (webOS, Tizen)
Testing:	Jest, Vitest, React Testing Library, Playwright, Cypress
Tools:	Git, GitHub Actions, GitLab CI, Docker, AWS (S3, CloudFront), Sentry, Turborepo, Expo, Claude Code, Cursor

EDUCATION

Belarusian State Academy of Aviation · Minsk, Belarus — 2012 – 2017

Specialist degree (5-year), Air Traffic Control

LANGUAGES

Turkmen: Native | **Russian**: Fluent | **English**: C1 (1-year language program in New York, USA)
